A Complex World
To know what’s happening inside a vehicle is essential for car manufacturers in today’s complex world - during development as well as during subsequent life. To get to know it in an efficient manner: do it remotely! For many years, therefore, CarMedialab has combined telematics and diagnostics knowledge as its core competency. The world’s major car manufacturers are benefitting from this technology by improving the quality of their vehicles and by reducing maintenance costs over their lifetime.

Key Requirements
• Quality assurance
• Fast feedback programs
• Evolution tracking of test vehicles
• Automated development documentation
• Customer behaviour analysis
• Preparation of new telematics opportunities
